Project Executable Files

Date	15 July 2026
Team ID	SWTID-2026-5757
Project Name	Credit card Approval Prediction
Maximum Marks	3 Marks

Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted(Yes/ No / NA)
1	Complete source code (all files and folders)	YES
2	README / Setup Guide (instructions to run the project)	YES
3	requirements.txt / package.json / dependency file	YES
4	Database schema / seed files (if applicable)	YES
5	Environment configuration file (.env.example or similar)	YES
6	Deployed application URL (if hosted)	YES
7	APK / Executable binary (if applicable for mobile/desktop apps)	YES
8	Dockerfile / Containerization config (if applicable)	YES
9	Test files and test results	YES
10	Demo video or walkthrough (if required)	YES

Step 2: File / Folder Structure

Provide an overview of your project's file and folder structure below:

```
static
  css
    style.css
  js
    script.js
templates
  home.html
  index.html
  result.html
app.py
credit_card_approval_prediction.i...
credit_card_model.pkl
requirements.txt
runtime.txt
```

Step 3: Deployment / Access Details

Field	**Details**
Hosted / Deployed URL	https://smartbridge-credit-card-approval.onrender.com/
Login Credentials (Demo)	NA
Platform / Hosting Provider	Render
Repository Link	https://github.com/ravikiran-m-p/Credit-Card-Approval-Predection
Demo Video Link	https://youtu.be/NkDhcae75gM

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:-

Prerequisites

- Python 3.11.8
- pip (Python Package Manager)
- Git (optional, for cloning the repository)

Step 1: Clone the Repository

```
git clone https://github.com/ravikiran-m-p/Credit-Card-Approval-Predection.git
```

Step 2: Navigate to the Project Folder

```
cd Credit-Card-Approval-Predection
```

Step 3: (Optional) Create a Virtual Environment

Windows

```
python -m venv venv
venv\Scripts\activate
```

Linux/macOS

```
python3 -m venv venv
source venv/bin/activate
```

Step 4: Install Required Dependencies

```
pip install -r requirements.txt
```

Step 5: Verify Required Files

Ensure the following files are present in the project directory:

- `app.py`
- `credit_card_model.pkl`
- `requirements.txt`
- `templates/`
- `static/`

Step 6: Run the Flask Application

```
python app.py
```

Step 7: Open the Application

Open your web browser and visit:

http://127.0.0.1:5000/

Step 8: Test the Application

1. Click **Predict** on the home page.
2. Enter the applicant details in the form.
3. Click **Predict Credit Approval**.
4. View the prediction result (**Approved** or **Rejected**) on the result page.

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	Model accuracy may be affected for applicants whose data differs significantly from the training dataset.	Future enhancement: Retrain the model with a larger and more diverse dataset.
2	The application predicts approval based only on the features available in the dataset and does not consider real-time financial information (e.g., credit score, bank transactions).	Can be enhanced by integrating external credit bureau or banking APIs in future versions.
3	The application currently supports prediction for a single applicant at a time.	Future enhancement: Add bulk prediction using CSV file upload.
